

Rainforest Plants

Interactive Id key & App Workshop with Gwen Harden & Bill McDonald

Rainforest Plants of Australia – Rockhampton to Victoria, is based on the popular interactive computer key (distributed as a USB) of the same name. The new app includes the full identification key to 1140 species and provides fact sheets, line drawings, over 8,000 photos and extensive information on each species, including previously unavailable botanical details.

It is a fantastic resource, a thorough and comprehensive source of information for all those concerned about rainforests, their biodiversity, distribution and conservation.

Saturday 11th February 2017

9.00 am—12.30 pm
